

Animal Jackets

The scientific community recognizes that the use of animal jackets in preclinical studies substantially eases the collection of data and minimizes unnecessary human interaction with the animal during drug administration. An effective animal jacket can ensure medical devices are not damaged or interfered with during a procedure.

Our Speciality

Ludomed jackets have been specially designed for a broad variety of scientific studies; especially infusion procedures, where the use of jackets is an important success factor.

Our inventory includes jackets for the following species:

- Non-Human Primates: Rhesus, Cynomolgus
- Canines: Beagles
- Rodents: Rats, Mice
- Swine: Yucatan, Göttingen
- Rabbits: NZ White Rabbits

Jackets for other species can be developed upon request.

Product Features

Soft cotton fabric trim: Provides increased comfort for the animal.

Heavy brass zipper: Provides increased wear resistance and makes zipper manipulation.

2 layers of polyester nylon mesh: Allows perspiration and temperature regulation.

Hook and loop adjuster: Can be adjusted depending on animal size.

The design of our jackets allows for on-the-spot adjustments in order to facilitate an animal's age and weight.

Additional accessories, such as pockets or inserts, can easily be added to Ludomed jackets for any specific needs.
